FRONTLIT PLUS B1 | H7022-0295-R

Freedom of Design. Reduced to the Essentials.

This PVC-free material is designed for short-term outdoor use and a wide range of indoor applications, including wall coverings. With widths of up to 505 cm | 198.8 inch and 275 g/m² | 8 oz/yd², it enables seamless large-format visuals for billboards, interiors, and architectural surfaces. Engineered for versatility, the material is high-frequency and hot-air weldable, sewable, and suitable for wall covering, allowing flexible processing across different production and installation methods. Its construction withstands wind loads, making it suitable for demanding outdoor environments while remaining easy to handle indoors.
The base fabric is made with recycled fibers, supporting a more responsible use of resources. Tested to meet building regulations for flammability and flame retardant according to applicable standards, the material is suitable for use in public and commercial spaces.

Made in Germany

The technical data are approximate values based on average values determined. For manufacturing reasons, deviations of up to -5% are possible. These technical specifications respond to the current state of knowledge and are intended to provide information about our products without legal obligation. These data apply to new goods. Suggested applications do not release the buyer from the obligation to check whether the material is suitable for the intended use. Our „plus“ rated products are manufactured with recycled yarns in the base fabric, certified to GRS 4.0 (100% rPET). Slight color variations may occur as a natural result of using recycled materials and do not represent a quality defect. The statements contained in this document apply to business customers in the B2B sector.

PCF values shown on front are based on an in-house calculation methodology aligned with the principles of the Greenhouse Gas (GHG) Protocol and apply to the “cradle-to-gate” and “cradle-to-grave” system boundaries.

“plus” = stands for added value – featuring defined material innovations such as GRS-certified recycled yarns or alternative technologies. Each product lists its specific features for full transparency.
