

SCRIM SPORTS 420 | 7908 5300

Air permeable grid fabric with strong dimensional stability.

scrim sports 420 is designed for sports environments where equipment is subject to constant impact and abrasion. Its open mesh construction allows air to move freely through the fabric, and its PVC coating creates a stable, resilient grid that retains its shape even after repeated stress. When used as a reinforcement layer for sports mats, it increases durability without adding weight.

It is a practical and tough solution for facilities that require materials that can withstand demanding athletic use and remain consistent over time.

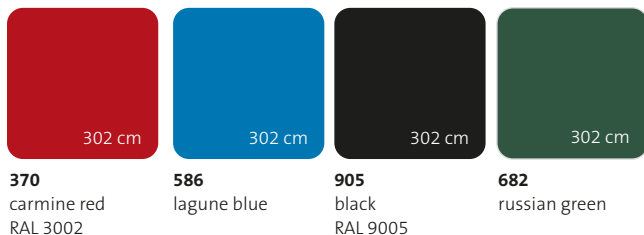

High Stability

PVC-coated scrim structure provides high stability and strength despite its low weight

Improved Ventilation

controlled air permeability ca. 40%, pressure equalization, and stable material performance

Other colors or widths on request. Print colors may differ from the original depending on the paper and printing process.

The technical data are approximate values based on average values determined. For manufacturing reasons, deviations of up to -5% are possible. These technical specifications respond to the current state of knowledge and are intended to provide information about our products without legal obligation. These data apply to new goods. Suggested applications do not release the buyer from the obligation to check whether the material is suitable for the intended use.
